Key Features

The first maintenance release of SAS Business Rules Manager 3.3 runs on the August 2020 release of SAS 9.4M7. For the June 2019 release of SAS Business Rules Manager, the user interface was rewritten in HTML5. Previously, many SAS applications and SAS solutions used the Adobe Flash Player to provide interactive user interfaces. Adobe announced that it intends to end support for Flash technology and will cease to update and distribute the Flash Player at the end of 2020. Browser vendors disabled Flash by default in 2019. For more information about Adobe Flash end-of-life, see SAS Software and Its Use of the Adobe Flash Player.

New features and enhancements in this release enable you to perform the following tasks:

- edit rules in an improved, simplified rule set editor. The previous views in the rule set editor are no longer available.
- add a stand-alone assignment statement to a rule set.
- create, move, and rename folders in the Manage Folders window. This window is available from the Actions menu (the icon) in each category view except My Tasks, Data, and Decisions. The Manage Folders window replaces the New Folder window.
- specify the brm.publish.add.all.rulefired.columns configuration property. This property specifies whether the rulesfiredforrecordcount, _recordCorrelationKey, and transaction_dttm columns are included in the rules-fired output tables that are created when you run a rule flow.

It is no longer possible to create data libraries or register tables from within SAS Business Rules Manager. You must use SAS Management Console to create data libraries and register tables.

In the application bar, the name SAS Decision Manager has been changed to SAS Decision Management.
