SAS® Model Manager 14.3: What’s New

Key Features

The first maintenance release of SAS Model Manager 14.3 runs on the August 2020 release of SAS 9.4M7. For the June 2019 release of SAS Model Manager, the user interface was rewritten in HTML5. Previously, many SAS applications and SAS solutions used the Adobe Flash Player to provide interactive user interfaces. Adobe announced that it intends to end support for Flash technology and will cease to update and distribute the Flash Player at the end of 2020. Browser vendors disabled Flash by default in 2019. For more information about Adobe Flash end-of-life, see SAS Software and Its Use of the Adobe Flash Player.

Here are some differences between SAS Model Manager 14.2 and 14.3:

- SAS Management Console replaces the Data category as the way to create data libraries and register tables.
- The Manage Folders feature replaces the New Folder window and Actions menu options for managing folders. The Manage Folders feature enables you to create and manage folders from within the Models, Projects, and Portfolios category views.
- The Models category view replaces the Inventory category view, and provides a way to import models into a folder, as well as export models and manage models in one place.
- In the application bar, the name SAS Decision Manager has been changed to SAS Decision Management.

It is no longer possible to do the following:

- Add model keywords
- Filter items by date modified in the Models, Projects, and Portfolios category views
- Filter the list of models by keywords and user-defined properties in the Models category view
- Duplicate or move a model from one folder to another folder

For more information about SAS Model Manager 14.3 available features, see SAS Model Manager: User’s Guide.
