Using This Book

Audience

This book documents the installation and initial configuration of SAS Visual Analytics for a non-distributed SAS LASR Analytic Server for a traditional, on-premises deployment. This book does not include deploying any other SAS product beyond SAS Visual Analytics for a non-distributed SAS LASR Analytic Server. If you are upgrading, see the SAS Guide to Software Updates.

Although the majority of figures in this guide are from a Microsoft Windows deployment, the experience is mostly identical on Linux. Differences in the deployment between operating systems are noted.

For documentation about deploying SAS Visual Analytics for a distributed SAS LASR Analytic Server on an analytics cluster or converting your SAS LASR Analytic Servers to run in distributed mode, see the SAS Visual Analytics: Installation and Configuration Guide (Distributed SAS LASR).

Documentation Conventions

SAS Installation Directory

The phrase SAS installation directory refers to a host path. (The SAS installation directory is sometimes referred to as SAS Home.) For example: C:\Program Files\SASHome.

SAS Configuration Directory

The phrase SAS configuration directory refers to a host path that includes a configuration name and level. For example: C:\SAS\Config\Lev1.

For more information, see “Overview of the Configuration Directory Structure” in SAS Intelligence Platform: System Administration Guide.
Chapter 1
Deploying SAS Visual Analytics (Non-distributed LASR)

What Is Covered in This Document?

This document is designed to help you quickly and efficiently deploy SAS Visual Analytics with a non-distributed SAS LASR Analytic Server on a single machine.

You use a program provided by SAS called the SAS Deployment Wizard to perform the actual installation and initial configuration of SAS Visual Analytics. The deployment wizard is an easy-to-use program that prompts you for the necessary information to automatically install and configure SAS Visual Analytics.

Note: The deployment wizard prompts you for information that might require input from your site’s IT team. Some of the answers that you provide (such as user names and passwords) should be recorded because you (or someone at your site) will need this information later to use and administer SAS Visual Analytics.
This document gives you step-by-step instructions to successfully deploy SAS Visual Analytics. If you find that you require more information about the deployment wizard configuration prompts, you can do the following:

- Click the Help button on the wizard page for the prompt in question.

- See the SAS Visual Analytics: Installation and Configuration Guide (Distributed SAS LASR).

SAS Visual Statistics Installation Instructions

If SAS Visual Statistics is part of your order, then when you perform the steps in this document for installing and configuring SAS Visual Analytics, you are also installing and configuring SAS Visual Statistics.

Upgrading a Pre-Existing SAS Visual Analytics Deployment

If you already have a SAS Visual Analytics deployment and you want to upgrade it to a later version, see Appendix 1, “Upgrading SAS Visual Analytics (Non-distributed LASR),” on page 63.

Deployment Process Overview

The following list summarizes the steps required to install and configure SAS Visual Analytics on a single machine:

1. Create a SAS Software Depot.
2. Check for documentation updates.
3. Prepare your environment.
5. Perform post-deployment steps.
6. Add SAS Visual Analytics users to the system.
8. Set ulimits.

Subsequent sections in this guide provide the step-by-step instructions that you need to complete these tasks.

Although the majority of figures in this guide are from a Microsoft Windows deployment, the experience is mostly identical on Linux. Differences in the deployment between operating systems are noted.

Step 1: Create a SAS Software Depot

SAS Visual Analytics must be installed from a SAS Software Depot, which is a repository for your SAS software media. If you already have a SAS Software Depot, skip to “Step 3: Prepare Your Environment” on page 7.
Note: If you receive your SAS Visual Analytics order by electronic software download (ESD), refer to your software order e-mail (SOE) for instructions on how to download your SAS order and create a SAS Software Depot. If you have already downloaded your SAS order, your SAS Software Depot is automatically created for you. Proceed to “Step 2: Check for Documentation Updates” on page 7.

If your installation media is in DVD format, create a SAS Software Depot by following these steps:

1. Insert Disk 1 into your DVD drive.

2. If the SAS Deployment Wizard does not automatically launch, open the DVD in Windows Explorer, right-click setup.exe, and select Run as administrator.

3. When prompted, select your language, and click OK.

4. On the Select Deployment Task page of the SAS Deployment Wizard, select Create or Add to a SAS Software Depot.
5. On the Specify Order Details page, click **Next**.

6. On the Specify Order Options page, select **Include complete order contents**, and click **Next**.

7. On the Specify SAS Software Depot Directory page, specify the location where you want to create your SAS Software Depot, and click **Next**. The location can be on the local machine or it can be on a network drive.
8. If the directory that you specify does not exist, the wizard prompts you. If you want it to create the directory for you, click **Yes**.

   **Note:** Your SAS Software Depot directory has a maximum length of 50 characters. Do not use special characters in the pathname.

9. On the Final Review page, click **Start** to create the SAS Software Depot.
Step 2: Check for Documentation Updates

It is very important to check for late-breaking installation information in SAS Notes and to review the system requirements for your SAS software.

- SAS Notes
- System Requirements--SAS Visual Analytics 7.5 (Distributed or Non-distributed LASR)
- System Requirements--SAS Visual Analytics 7.5 and SAS Visual Statistics 7.5

Step 3: Prepare Your Environment

Overview of Prepare Your Environment

Before you can deploy your SAS software, you need to prepare your server machine. Perform the steps in the following sections.

Review Your Pre-Installation Checklist

A pre-installation checklist accompanies the deployment plan that was prepared for deploying SAS at your site. Be sure to refer to that checklist as you prepare your environment.

Set Up User Accounts

User accounts that are needed for your SAS deployment can be either local accounts on the machine on which you are deploying SAS, or domain accounts that have access to the machine. Although you can use your own account names, SAS recommends using the names that are listed in the following table. If you choose to use different account names, be sure to record the names (and passwords) for future reference.

Table 1.1 Pre-installation Checklist for User Accounts

<table>
<thead>
<tr>
<th>User Account</th>
<th>Operating System</th>
<th>Recommended User ID</th>
</tr>
</thead>
<tbody>
<tr>
<td>Installer</td>
<td>Both</td>
<td>my-domain\sas</td>
</tr>
<tr>

</tr>
<tr>
<td>Windows</td>
<td></td>
<td><strong>Log on as a batch job</strong></td>
</tr>
<tr>
<td></td>
<td></td>
<td>Linux</td>
</tr>
</tbody>
</table>

* The SAS Deployment Wizard automatically assigns the Log on as a batch job right to the SAS Spawned Servers account and SAS First User account.
** Not required but recommended when validating your deployment.

The accounts that are listed in the preceding table are recommended and used for the following purposes:

- Installer is used to install SAS. After you create the account, log on to the machine with this account to perform the deployment. It is recommended that this account remain available for future SAS maintenance and updates.
- SAS Spawned Servers is the process owner for SAS Stored Process Servers and SAS Pooled Workspace Servers on the machine. During the SAS deployment, the SAS Deployment Wizard prompts you to enter the account name and password for this account.
- SAS First User is used for demonstration purposes. This account is often referred to as sasdemo. During the SAS deployment, the SAS Deployment Wizard prompts you to specify the account name for this account. The SAS First User account is not a required account. However, it is used for the purposes of this installation guide.
Set Up an Operating System Group

Set Up the SAS Server Users Group (Windows)
To run SAS on Windows, users must have the Log on as a batch job right on the machine that hosts the server. We recommend that you create a group on the server, add SAS users to the group, and then assign that group the Log on as a batch job right.

Note: The SAS Deployment Wizard automatically assigns the Log on as a batch job right for the SAS Spawned Servers account and SAS First User account.

To create the SAS Server Users group and assign the Log on as a batch job right, do the following:
1. Click Start. In the Search programs and files field, enter Computer Management, and select it from the Start menu when it appears.
2. Expand Local Users and Groups.
4. Name the group “SAS Server Users,” and click Create.
5. Assign the Log on as a batch job right to the new SAS Server Users group.
   - Click Start. In the Search programs and files field, enter Local Security Policy, and select it from the Start menu when it appears.
6. In the left pane of the Local Security Policy window, expand Local Policies, and click User Rights Assignment.
7. In the right pane under the Policy column, double-click Log on as a batch job. This displays the Log on as a batch job Properties dialog box.
8. On the Local Security Setting tab, click Add User or Group. In the Enter the object names to select field, enter SAS Server Users, and click Check Names to select the SAS Server Users group. Then, click OK to return to the Log on as a batch job Properties dialog box. Verify that the new group that you created appears in the text box on the Local Security Setting tab.
9. Click OK to close the dialog box and return to the Local Security Policy window.

In the future, any new SAS users that you add to your SAS system can be granted the Log on as a batch job right by adding them to the SAS Server Users group in Windows. Because the SAS Server Users group was assigned the Log on as a batch job right, it is not necessary to explicitly assign this right to users in the Local Security Policy window.

Set Up the sas Group (Linux)
To run SAS on Linux, you should create an operating system group (sas) and make it the primary group for the Linux Installer user. The SAS Spawned Servers account should be made a member of the sas group. (Members of this group are given access to certain directories and files created by the SAS Deployment Wizard.)

For information about creating groups and adding user accounts, see your Linux documentation.

Download and Install Required Third-Party Software
SAS Visual Analytics requires that your machine have the following third-party software installed:
• Windows PowerShell

Windows PowerShell is a configuration management and task automation framework from Microsoft that is required by SAS Visual Analytics.

Later, you are prompted for the Windows PowerShell installation path.

• Python

Python is a general-purpose programming language required by SAS Information Retrieval Studio.

Later, you are prompted for the Python installation path.

Note: For more information about Python, see Installation Note 50147.

• JUnit

To run certain test suites, the SAS Deployment Tester requires JUnit, which is an open-source framework for writing and running tests in the Java programming language.

Later, you are prompted for the JUnit installation path.

If you need any of this software, you can download it from SAS Support for Additional Software Products.

Note the location where this third-party software resides on your machine. (See the following table.)

Table 1.2 Pre-installation Checklist for Third-Party Software

<table>
<thead>
<tr>
<th>Third-Party Software</th>
<th>Default Installation Path</th>
<th>Actual Installation Path</th>
</tr>
</thead>
<tbody>
<tr>
<td>Windows PowerShell</td>
<td>C:\Windows\System32\WindowsPowerShell\v1.0</td>
<td></td>
</tr>
<tr>
<td>Python</td>
<td>C:\Python27</td>
<td></td>
</tr>
<tr>
<td>JUnit</td>
<td>C:\junit\junit-4.8.1.jar</td>
<td></td>
</tr>
</tbody>
</table>

Step 4: Install and Configure SAS

To install and configure SAS Visual Analytics, you use a standard deployment plan. A deployment plan is similar to a recipe that tells the SAS Deployment Wizard how to install your software order.

Later in this topic, you are asked to choose between two standard deployment plans that are labeled SAS Visual Analytics, two machines. The first machine contains the SAS Visual Analytics server tier, middle tier, and clients. The second machine contains administrative clients. These two plans differ only in that one plan is used for a Windows server and middle tier, and the other plan is used for a Linux server and middle tier.

This topic describes how to deploy SAS Visual Analytics on the server and middle tier machine. If you want to deploy on additional client machines, then rerun the deployment wizard on one or more additional machines, making sure to select Step 4: Clients on the Select Deployment Step and Products to Install page.
Note: Actually, these deployment plans can accommodate additional machines if you want to cluster your SAS Metadata Server (Step 2) or your middle tier (Step 3). For more information, see *SAS Visual Analytics: Installation and Configuration Guide (Distributed SAS LASR)*.

To install and configure SAS Visual Analytics on a single machine, follow these steps:

1. Log on to the machine using the Installer account that you created earlier or using an account that is a member of the Windows Administrators group.

2. Temporarily disable all encryption, anti-virus, anti-malware, anti-spyware, and firewall software. These types of programs can interfere with the deployment process and block files as they are being copied and extracted.

3. On Windows, start Windows Explorer, and navigate to the highest-level directory in your SAS Software Depot. Right-click setup.exe, and select **Run as administrator**. On Linux, navigate to the highest-level directory in your SAS Software Depot, and run setup.sh.

4. Choose Language
   - From the drop-down list, select the language that you want the deployment wizard to use when it displays text, and click **OK**.
5. Select Deployment Task
   • Select **Install SAS Software**, and click **Next**.

6. Specify SAS Home
   • If you want to specify a different location other than the default, enter the location in **SAS Home**. Click **Next**.

   Although your SAS installation directory (which the wizard refers to as SAS Home) and SAS configuration directories can share the same parent directory, one directory cannot reside inside another. Also, the SAS installation directory should not be a directory within your SAS Software Depot.
CAUTION:
The directory path for the SAS installation directory (SAS Home) cannot contain parentheses. Using parentheses causes SAS Environment Manager scripts to fail.

7. Select Deployment Type

- Confirm that Perform a Planned Deployment, Install SAS Software, and Configure SAS Software are all selected. Click Next.

8. Specify Deployment Plan

- Choose Select a standard deployment plan.
• On Windows, from the drop-down menu, select **Visual Analytics, two machines, wx6**, and then click **Next**.

• On Linux, from the drop-down menu, select **Visual Analytics, two machines, lax and wx6**, and then click **Next**.

9. Select Deployment Step and Products to Install

• From the **Deployment Step** drop-down menu, make sure that **Step 1: Middle Tier, and Clients** is selected. Click **Next**.

**Note:** Included in your SAS 9.4 order are procedures that enable you to take advantage of additional functionality that is provided by SAS Viya. You must have a SAS Viya license to use the OPTNETWORK procedure and the procedures for these products:

• SAS Visual Data Mining and Machine Learning

• SAS Visual Statistics

• SAS Econometrics

• SAS Visual Forecasting
10. Specify SAS Installation Data File
   • Click Browse, locate your SAS installation data file, and then click Next.

11. Select Language Support
   • Click Clear All. (English remains selected as the default language.)
   • Add additional languages that you want SAS software to support, and then click Next.
12. Select Regional Settings
   - Accept the default value of English (United States, or select a different language, region, and locale in **Language (Region) [Locale]**). Click Next.

13. Select Authentication Type (Linux only)
   - Do not change any of the default values displayed on this page. Click Next.
14. Specify Remote Communication Configuration

- Do not change the default information that is displayed on this page. Click Next.

Note: Generally speaking, you should not change any port values unless a port is already used by another application. See your pre-installation checklist for the complete list of ports that SAS Visual Analytics requires. For more information, see “Review Your Pre-Installation Checklist” on page 7.

15. Checking System

- Wait while the SAS Deployment Wizard checks your system. When it is finished, click Next.
16. Review Required Software
   - Review the list of third-party software that is required for the SAS software that you are installing on the current machine. Click **Next**.

17. Specify Software Location
   - Click **Next**.
     
     If the path is incorrect, the wizard does not proceed. In this case, enter the correct path where the third-party software is installed that you recorded in Table 1.2 on page 10. Click **Next**.
18. Specify Software Location

  - Click **Next**.

    If the path is incorrect, the wizard does not proceed. In this case, enter the correct path where the third-party software is installed that you recorded in Table 1.2 on page 10. Click **Next**.

19. Select Configuration Prompting Level

  - Make sure that **Typical** is selected, and click **Next**.
20. Provide the remaining configuration information as the wizard prompts you for it.

Note: The following steps describe some of the more important pages that you encounter during the configuration phase of a SAS Visual Analytics deployment. The options for which the deployment wizard prompts you depend on which SAS products are identified in your deployment plan. In addition, in multiple-machine deployments, the options depend on which machine you are currently deploying. For information about all deployment wizard prompts, see the online Help.

21. Specify Configuration Information
   - Do not change the default information that is displayed on this page unless you want the SAS configuration directory to reside in a different folder. Click **Next**.
22. Local Machine Name

- In **Fully-qualified Local Host Name**, enter the complete name of the local host.
  
The fully qualified local host name typically takes the form of the local host name plus the domain name server (for example, MyMachine.example.com).
  
  *Note:* As noted in RFC 952, underscores and whitespace characters are not allowed in host names.

  **TIP**  If you do not know the domain name server used at your site, check with your system administrator.

- In **Short Local Host Name**, enter a short host name.
  
The short local host name is the abbreviated, more common name of the host, usually a single word (for example, MyMachine).
23. Migration Information

- Do not select Perform migration. Click Next.

24. Windows Shortcuts (Windows only)

- In Create Windows Shortcuts, make sure that For All Users is selected. Click Next.
25. Integrated Windows Authentication

- Do not select **Use Integrated Windows authentication (single sign-on)** unless your system administrator has already set up IWA in your computing environment. Click **Next**.

26. Token-based Authentication

- Do not select **Use SAS token authentication**. Click **Next**.
27. SAS Metadata Server
   • Do not change the default information that is displayed on this page. Click Next.

28. SAS Metadata Server: Override Backup Location
   • Do not change the default information that is displayed on this page. Click Next.
29. SAS Metadata Server: Override Service Login Account (Windows only)
   • Do not change the default information that is displayed on this page. Click Next.

30. Deployment Accounts: Type of Accounts
   • Do not change the default information that is displayed on this page. Click Next.
31. External Account: Installer

- In the relevant fields, enter the user ID and password for the Installer account that you are using to install and configure the SAS Metadata Server. (This should be the user account under which you are currently logged on.)

Prefix the user ID with either the domain or machine name (for example, `domain\user-ID` or `machine-name\user-ID`). Click Next.

32. Password for Current ID (Linux only)

- In **Password for Current ID**, enter the password for the current user ID.
On Linux, this page appears if you have indicated on the previous page that you want the SAS Deployment Wizard to run the setuid.sh script via sudo. If you have any concerns about the SAS Deployment Wizard running as root or you do not know the sudo information for the machine on which you are installing, you should go back and change your previous selection.

- In **Confirm Password**, re-enter the password.

### 33. SAS Internal Account: Unrestricted Administrator

- Enter and confirm the password that is used for the internal sasadm@saspw account.

  **Note**: Record this password because you will need it in the future.

- Select **Set passwords using the Unrestricted Administrator password** if you want to reuse this password for the internal SAS Metadata Server accounts and SAS Web Infrastructure Platform Data Server accounts during this deployment.

  **Note**: There are password restrictions for SAS Web Infrastructure Platform Data Server. Make sure that your password meets the criteria described in “SAS Web Infrastructure Platform Data Server” in *SAS Intelligence Platform: Middle-Tier Administration Guide*.

For more information, see “Reducing the Number of Password Prompts” in the *SAS Visual Analytics: Installation and Configuration Guide (Distributed SAS LASR)*.

- Click **Next**.
34. SAS Internal Account: Trusted User

- Enter and confirm the password that is used for the internal sastrust@saspw account. Click Next.

  *Note:* Record this password because you will need it in the future.

35. Anonymous Web Access

- Make sure that Enable anonymous web access is selected. Click Next.
36. SAS Internal Account: Anonymous Web User

- Enter and confirm the password that is used for an internal webanon@saspw account. Click Next.

  Note: Remember this password as you will need it in the future.

37. SAS Visual Analytics: Allow Guest Access

- Do not change any of the default values displayed on this page. Click Next.
38. External Account: SAS Spawned Servers Account

- In the relevant fields, enter the user ID and password for the SAS Spawned Servers account.

  Note: Record this password because you will need it in the future.

  Prefix the user ID with either the domain or machine name (for example, `domain\user-ID` or `machine-name\user-ID`). Click Next.

39. Deployment Accounts: First User

- Select **Set up a First User Identity**. Click Next.
The SAS First User account, which is often referred to as sasdemo, is used for demonstration purposes. Although it is not required, the SAS First User account can be used to validate your deployment.

40. External Account: First User
   - In **External User ID**, enter the user ID for the SAS First User account.
     Prefix the user ID with either the domain or machine name (for example, `domain\user-ID` or `machine-name\user-ID`). Click **Next**.

41. Encryption
   - Do not change the default information that is displayed on this page. Click **Next**.
42. Estimated System Size

- **In Size Estimate**, select **Large System**. Click **Next**.

  For more information, see “Initial Sizing and Tuning Configuration Options for Deployments” in *SAS Web Applications: Tuning for Performance and Scalability*.

43. E-mail Server

- **In Host Name**, enter the host name for an SMTP email server at your site. SAS uses this server to send alerts for system-related issues to an administrator. Click **Next**.
If you do not know the name of the SMTP email server at your site, check with your system administrator.

44. SAS Object Spawner
   • Do not change the default information that is displayed on this page. Click Next.

45. SAS Object Spawner: Port Bank
   • Do not change the default information that is displayed on this page. Click Next.
46. SAS Application Server: Server Context
   - Do not change the default information that is displayed on this page. Click Next.

47. SAS Workspace Server
   - Do not change the default information that is displayed on this page. Click Next.
48. SAS Pooled Workspace Server
   - Do not change the default information that is displayed on this page. Click Next.

49. SAS Stored Process Server
   - Do not change the default information that is displayed on this page. Click Next.
50. Stored Process : Multibridge Connections

- Do not change the default information that is displayed on this page. Click Next.

51. SAS Web Infrastructure Platform Data Server

- Enter and confirm a password that SAS creates for the dbmsowner user ID. Click Next.

**Note:** There are password restrictions for SAS Web Infrastructure Platform Data Server. Make sure that your password meets the criteria described in “SAS Web Infrastructure Platform Data Server” in *SAS Intelligence Platform: Middle-Tier Administration Guide.*
Note: Record this password because you will need it in the future.

- Do not change the default information that is displayed on this page. Click Next.

52. SAS DATA Step Batch Server

- Do not change the default information that is displayed on this page. Click Next.

53. SAS Deployment Tester Server

- Do not change the default port information that is displayed on this page. Click Next.

- In JUnit JAR File, enter the JAR file path (for example, C:\junit\junit-4.8.1.jar) or click Browse to select it. Click Next.
54. SAS Web Server: Automated or Manual Configuration Option

- Do not change the default information that is displayed on this page. Click Next.

55. SAS Web Server: Configuration

- Do not change the default information that is displayed on this page. Click Next.
56. Web Application Server: JMS Configuration
   • Do not change the default information that is displayed on this page. Click Next.

57. Web Application Server: Configuration
   • Do not change the default information that is displayed on this page. Click Next.
58. Web Application Server: Ports
   - Do not change the default information that is displayed on this page. Click Next.

59. Web Applications: Automatic Deployment
   - Do not change the default information that is displayed on this page. Click Next.
60. **In URLs White List**, enter a comma-delimited list of additional known hosts and domains to trust in the following form:

```
http|https://host[::port]|domain/, ...
```

The valid URLs whitelist can include just a list of host names to trust. The valid URLs whitelist can also include wildcards such as * for host name and domain.

*Note:* The port number must be specified if the whitelisted site uses port numbers other than the standard 80 for HTTP or 443 for HTTPS.

For example:

```
https://myserver:443/,http://example.com
```

For security reasons, you must list any host name URL for any site that could redirect browsers to your software. This might include corporate sites linking to your software for reporting purposes or single sign-on servers.

For example, if `https://corporatePortal.company.com/` links to your server, then enter `https://corporatePortal.company.com/` as one entry. This field enables you to add additional known hosts and domains to a preset list automatically created by the SAS configuration process.

For more information, see “Configure the Cross Domain Proxy Servlet through a Whitelist” in *SAS Intelligence Platform: Middle-Tier Administration Guide*.

- Select **Enter advanced options for URL white list handling** to display an additional page on which you can specify advanced options for the whitelist.
61. SAS Web Application Themes

- Do not change the default information that is displayed on this page. Click Next.

62. SAS Content Server: Repository Directory

- Do not change the default information that is displayed on this page. Click Next.
63. SAS Environment Manager: Administration Database Configuration

- Enter and confirm a password for the adminowner user ID. Click Next.
  
  *Note:* Record this password because you will need it in the future.

- Do not change the default information that is displayed on this page. Click Next.

64. SAS Internal Account: SAS Environment Manager Service Account

- Enter and confirm a password for the SAS Environment Manager Service account (sasevs@saspw). Click Next.
  
  *Note:* Record this password because you will need it in the future.
The password must contain at least six characters. Make sure that you enter the same password that was specified in any previous SAS Environment Manager configuration prompts.

65. SAS Environment Manager: Database Configuration

- Enter and confirm a password and an encryption passphrase that the deployment wizard uses when creating credentials for the SAS Environment Manager user ID. Click Next.

  Note: Record this password and passphrase because you will need them in the future.

  The password must contain at least six characters.

  The passphrase must be at least eight characters long and can contain letters and numbers only.

- Do not change the information that is displayed on this page. Click Next.
66. SAS Application Themes

- Do not change the default information that is displayed on this page. Click Next.

67. SAS Visual Analytics Data Provider

- This page appears only when your SAS order contains a license for the distributed SAS LASR Analytic Server.

- In SAS Visual Analytics High-Performance Data Provider, select Non-distributed LASR. Click Next.
68. SAS Visual Analytics High-Performance Configuration Information

• Do not change any of the default values displayed on this page. Click Next.

69. SAS Visual Analytics Public Data Provider

• Do not change any of the default values displayed on this page. Click Next.
70. SAS Visual Analytics Public Data Library Information

- Do not change any of the default values displayed on this page. Click **Next**.

71. SAS LASR Analytics Server Monitor Hadoop Options

Specify SAS LASR Analytic Server Monitor Hadoop options. Click **Next**.

- In **Enable SSH**, enter **true** or **false** to indicate whether SSH-based communication should be used.

**CAUTION:**
If you set this property to false, your environment becomes unsecure. See “hadoop.plugins.use.ssh” in SAS Visual Analytics: Installation and Configuration Guide (Distributed SAS LASR).

- In SSH Command Path, enter a command to invoke SSH (on the machine where SAS Environment Manager Administration runs). On Windows, make sure this field is cleared and left blank.

- In SSH Options, enter SSH command options. Separate options with a space. Individual options cannot contain quotation marks or shell-provided syntax (such as "~"). On Windows, make sure this field is cleared and left blank.

- In Hadoop Install Path, enter the installation directory (home path) for Hadoop. See “hadoop.plugins.hadoop.home” in SAS Visual Analytics: Installation and Configuration Guide (Distributed SAS LASR).

- In STDERR Redirection, enter a directory path to which standard is redirected.

72. SAS Visual Analytics: SAS LASR Analytic Server Library

- Do not change any of the default values displayed on this page. Click Next.

73. SAS Visual Analytics Transport Service: Whitelist Mobile Devices

- Do not change any of the default values displayed on this page. Click Next.
74. SAS Visual Analytics: Protocol for OpenStreetMap
   • Do not change any of the default values displayed on this page. Click Next.

75. SAS Visual Analytics Sample Reports
   • Click Next.
76. SAS Visual Analytics: Configure ArcGIS
   - Do not change any of the default values displayed on this page. Click Next.

77. SAS Visual Analytics: Access to Geo Map URLs
   - Do not change the default information that is displayed on this page. Click Next.
78. SAS Deployment Backup and Recovery Tool: Enable Central Vault

- Do not change the default information that is displayed on this page. Click Next.

**TIP** If you are deploying a SAS solution, you should refer to your solution-specific documentation to complete your deployment.

79. Deployment Summary

- Make one of the following choices:
  - Click Start to begin installing SAS files and writing the configuration to the current machine.
The deployment wizard launches the installation and configuration process and provides an ongoing status update.

- Click **Back** to navigate to previous pages to change installation and configuration information.
- Click **Cancel** to terminate the deployment wizard session. Note that you will lose installation and configuration information previously entered.

**CAUTION:**

If you encounter a situation in which the deployment wizard reports a configuration failure, leave the error message displayed. Do not continue. Consult additional documentation and, if necessary, contact SAS Technical Support. Moving past an error most often results in having to delete your deployment and start over.

On Linux, when you are installing the server tier, you are instructed to run a script as root. As the message in the installation program explains, certain SAS products and features use functionality that requires SAS to check user ID authentication and file access authorizations. This, in turn, necessitates that certain files within your SAS installation have setuid permissions and be owned by root.

On Windows, the deployment wizard checks to make sure that your machine contains the minimum system requirements necessary to run SAS 9.4. Sometimes, it is necessary to reboot your machine after the wizard has installed certain system components. When this occurs, after you log back on to the machine, the wizard continues to the next configuration step in your SAS deployment process.
80. Insufficient Permissions (Linux only)

- Keeping this dialog box displayed, run the setuid.sh script as root, and then click Retry.
- You do not see this dialog box if you chose earlier to run setuid.sh as sudo using your password.

81. Deployment Complete

- A green check mark next to every item on this page indicates that your deployment completed successfully. Click Next.
- If your deployment was successful, then you are ready to perform the post-deployment steps that are documented in “Step 5: Perform Post-Deployment Steps” on page 55.
- If you received errors during your deployment, then contact SAS Technical Support at support@sas.com. Attach to your email the files listed in
82. Additional Resources

- Click Finish to close the SAS Deployment Wizard.

83. Configuration Guidelines and Details

- To complete your SAS deployment, review the configuration guidelines and details and perform the steps listed.
Configuration Guidelines and Details (the Instructions.html file) is automatically generated by the deployment wizard. It has post-installation steps specific to your SAS order that you must perform.

Overview

1. Warnings and Notices
2. SAS Management Console
3. SAS Application Servers
4. SAS Smarrings
5. SAS Web Infrastructure Platform Data Server
6. SAS Deployment Tester Server
7. Operating System Services Scheduling Server
8. SAS Visual Analytics
9. SAS Information Integration Studio
10. SAS Web Infrastructure Platform Scheduling Services
11. Remote Services
12. SAS Environment Manager Configuration
13. SAS Environment Manager Agent Configuration
14. SAS Environment Manager Enablement Kit Server
15. SAS Web Server Configuration
16. Web Application Server
17. SAS Fusion Server

Step 5: Perform Post-Deployment Steps

After your deployment has completed, there are some post-deployment steps specific for your SAS order that are documented in your Instructions.html file. Located in SAS-configuration-directory\Documents, Instructions.html provides the steps for checking that your SAS servers are running and that your web applications were properly deployed.
If you have not already done so, use Instructions.html and perform all the post-deployment steps that it contains.

Remember to restart any anti-virus, anti-malware, anti-spyware, and firewall software that you disabled to deploy SAS.

Note: You must perform an important post-deployment task for SAS Information Retrieval Studio. For more information, see “Post-Deployment Tasks for SAS Information Retrieval Studio” in *SAS Visual Analytics: Installation and Configuration Guide (Distributed SAS LASR)*.

Proceed to “Step 6: Add SAS Users”

---

### Step 6: Add SAS Users

Now that you have deployed SAS and successfully validated that your software is working properly, it is time to add your SAS users to the SAS system. Adding host or domain accounts for SAS users to the SAS metadata gives each user a SAS metadata identity. This enables SAS users to use the software and access SAS metadata objects.

For more information, see the *SAS Management Console: Guide to Users and Permissions*.

Perform the following steps to add SAS users to SAS metadata:

1. Grant the host or domain accounts for each user the required **Log on as a batch job** right. You can do this by adding the user accounts to the SAS Server Users group that was created in the section “Set Up an Operating System Group” on page 9.

2. Create a metadata identity for each user. Follow these steps using SAS Management Console:
a. From the Windows Start menu, select All Programs → SAS → SAS Management Console.

b. In the Log On dialog box, enter the credentials for the SAS Unrestricted User (sasadm@saspw) and the password specified when you deployed SAS.
c. Select **User Manager**.

d. Select **Actions ➔ New ➔ User**.

e.
In the **Name** text box, enter the name of the user.

g. Click the **Accounts** tab, and then click **New**.

h. Click **OK**.

i. Then, click **OK** again.

Proceed to “Step 7: Validate Your SAS Visual Analytics Deployment”.

---

**Step 7: Validate Your SAS Visual Analytics Deployment**

Here are suggestions about how you can validate your non-distributed SAS Visual Analytics deployment using SAS Home. The SAS Visual Analytics documentation is available at [http://support.sas.com/documentation/onlinedoc/va/index.html#va75](http://support.sas.com/documentation/onlinedoc/va/index.html#va75).
Table 1.3  Suggestions for SAS Visual Analytics Validation

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Actions</th>
<th>More Information</th>
</tr>
</thead>
<tbody>
<tr>
<td>Create an account for use later in the validation.</td>
<td>1. Log on as the SAS LASR Analytic Server installer and create a new administrator account (such as saslasradm).</td>
<td>Operating system documentation</td>
</tr>
<tr>
<td></td>
<td>2. (On Windows) Assign the Windows user permission Log on as a batch job to the account.</td>
<td></td>
</tr>
<tr>
<td></td>
<td>1. Define a SAS Visual Analytics administrator.</td>
<td></td>
</tr>
<tr>
<td></td>
<td>2. Assign the administrator to the Visual Analytics Data Administrators group and the Visual Data Builder Administrators group.</td>
<td></td>
</tr>
<tr>
<td></td>
<td>3. Give the administrator the necessary operating system permissions to write to the signature files directory.</td>
<td></td>
</tr>
<tr>
<td></td>
<td>To find the signature files directory location, in SAS Management Console, select Server Manager \rightarrow LASR Analytic Server \rightarrow Properties \rightarrow Options \rightarrow Advanced Options \rightarrow Additional Options.</td>
<td></td>
</tr>
<tr>
<td>Validate that SAS Home is running and users can sign in as expected.</td>
<td>Sign on to SAS Home as saslasradm (for example,<a href="http://myHost.example.com/SASVisualAnalyticsHub">http://myHost.example.com/SASVisualAnalyticsHub</a>).</td>
<td>“Access SAS Home” in SAS Home Documentation</td>
</tr>
<tr>
<td></td>
<td>1. Click the side menu icon (next to SAS Home) ⋯.</td>
<td></td>
</tr>
<tr>
<td></td>
<td>2. Click Administrator.</td>
<td></td>
</tr>
<tr>
<td></td>
<td>3. Select the check box next to Public LASR Analytic Server.</td>
<td></td>
</tr>
<tr>
<td></td>
<td>4. Click the start button ⚙.</td>
<td></td>
</tr>
<tr>
<td>Demonstrate that SAS Environment Manager Administration is functional and able to communicate with the SAS LASR Analytic Server.</td>
<td>In SAS Environment Manager Administration:</td>
<td>“Load a Table” in SAS Visual Analytics: Administration Guide</td>
</tr>
<tr>
<td></td>
<td>1. Right-click Public LASR Analytic Server, and select Load a Table.</td>
<td></td>
</tr>
<tr>
<td>Demonstrate that SAS Visual Data Builder is functional.*</td>
<td>In SAS Home:</td>
<td>SAS Visual Data Builder: Preparing Data</td>
</tr>
<tr>
<td></td>
<td>1. Click Data Preparation.</td>
<td></td>
</tr>
<tr>
<td></td>
<td>2. In the SAS Visual Data Builder window, click New Object.</td>
<td></td>
</tr>
<tr>
<td></td>
<td>1. Click Report Builder.</td>
<td></td>
</tr>
<tr>
<td></td>
<td>2. Click Data.</td>
<td></td>
</tr>
<tr>
<td></td>
<td>The Open Data Source window is displayed.</td>
<td></td>
</tr>
<tr>
<td></td>
<td>4. Select one or more data sources that begin with VA_SAMPLE, and click Add.</td>
<td></td>
</tr>
</tbody>
</table>
Step 8: Set ulimits

(On Linux) On the SAS middle tier system, set ulimit settings in `/etc/security/limits.conf` for the Installer user account that runs the SAS Web Application Server processes.

For example, here are ulimit settings added to `/etc/security/limits.conf` for the Installer user account, *sas*:

```
sas - nofile 150000
sas - nproc 100000
sas - stack 10240
```

The NPROC (max number of processes) changes do not take effect unless `/etc/security/limits.d/90-nproc.conf` (Red Hat Enterprise Linux 6) or `/etc/security/limits.d/20-nproc.conf` (Red Hat Enterprise Linux 7) is also changed.

For example, to allow 100,000 processes on Red Hat Enterprise Linux 6, make the following change to `/etc/security/limits.d/90-nproc.conf`:

```
sas soft nproc 100000
```
Appendix 1
Upgrading SAS Visual Analytics (Non-distributed LASR)

Two Upgrade Options

You have two options for upgrading SAS Visual Analytics:

• SAS automatic migration tools
  For more information, see “Migrating SAS Visual Analytics” in the SAS Visual Analytics: Installation and Configuration Guide (Distributed SAS LASR).

• SAS Deployment Wizard (Update mode)
  For more information, see “Overview of Upgrading SAS Visual Analytics (Non-Distributed SAS LASR)”.

User Accounts Password Checklist

During the upgrade process, the SAS Deployment Manager prompts you for passwords for various SAS user accounts. Use the following table to collect these passwords for use during your upgrade process:

Table A1.1 User Account Credentials Required to Upgrade SAS Visual Analytics

<table>
<thead>
<tr>
<th>SAS User Account</th>
<th>Default User ID</th>
<th>Actual User ID</th>
<th>Actual Password</th>
</tr>
</thead>
<tbody>
<tr>
<td>SAS Internal Account: Unrestricted Administrator</td>
<td>sasadm@saspw</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
## Overview of Upgrading SAS Visual Analytics (Non-Distributed SAS LASR)

Follow these steps to upgrade SAS Visual Analytics using the SAS Deployment Wizard running in update mode:

**Note:** Upgrading to SAS Visual Analytics 7.5 is supported for versions 6.2 and later.

1. Properly back up your existing system.
   
   **CAUTION:** The upgrade process writes over the existing system. If any problems are encountered, it might be necessary to recover the existing system from backup. Keep in mind that your existing system can be corrupted to the point of being unusable and unrecoverable. Backing up your system should include backing up your SAS Metadata Server. For more information, see “Backing Up and Recovering the SAS Metadata Server” in *SAS Intelligence Platform: System Administration Guide*.

2. Understand how the SAS Deployment Wizard upgrades SAS software.
   

---

<table>
<thead>
<tr>
<th>SAS User Account</th>
<th>Default User ID</th>
<th>Actual User ID</th>
<th>Actual Password</th>
</tr>
</thead>
<tbody>
<tr>
<td>SAS Internal Account: Trusted User</td>
<td></td>
<td>sastr@saspw</td>
<td></td>
</tr>
<tr>
<td>SAS Web Infrastructure Platform Database User</td>
<td></td>
<td></td>
<td>SharedServices</td>
</tr>
<tr>
<td>SAS Internal Account: SAS Environment Manager Service Account</td>
<td></td>
<td>sasevs@saspw</td>
<td></td>
</tr>
<tr>
<td>SAS Visual Analytics Services Database User</td>
<td>vatadm</td>
<td></td>
<td></td>
</tr>
<tr>
<td>SAS Visual Data Builder Database User</td>
<td>vbadm</td>
<td></td>
<td></td>
</tr>
<tr>
<td>SAS Internal Account: Search Interface to SAS Content User</td>
<td>sassearch@saspw</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
3. Understand how your SAS Visual Analytics deployment will change.
   (In some releases, new SAS products are added during upgrades.)

5. Locate and familiarize yourself with your SAS software order.

6. Gather the list of SAS user account credentials that you are required to upgrade.
   See “User Accounts Password Checklist” on page 63.

7. Download your order and create a SAS Software Depot.
   See “Step 1: Create a SAS Software Depot” on page 3.

   See “Upgrade SAS Visual Analytics (Non-Distributed SAS LASR)” on page 66.

   See UpdateInstructions.html, which is located in the Documents subdirectory of your SAS configuration directory (for example, C:\SAS\Config\Lev1\Documents).
   If no manual steps are listed in UpdateInstructions.html, then the upgrade process is completed for the deployment in this configuration directory.

10. Validate your deployment.

11. Before you begin using SAS Visual Analytics, check to see whether there are any new groups or capabilities that have been added to SAS metadata and whether any new metadata properties need to be manually updated.
12. Be sure to load your data sources into SAS LASR Analytic Server to enable reporting and exploration.

Upgrade SAS Visual Analytics (Non-Distributed SAS LASR)

To upgrade SAS Visual Analytics with a non-distributed SAS LASR Analytic Server, follow these steps:

1. Make sure that you have the necessary SAS user account passwords discussed in “User Accounts Password Checklist” on page 63. You are prompted for these passwords during the upgrade process.

2. Log on to the machine using the SAS installer account.

3. In the pre-upgrade environment, shut down all SAS LASR Analytic Servers using SAS Visual Analytics administrator.

   For more information, see “Operating Servers” in the SAS Visual Analytics: Administration Guide.

4. Shut down all active SAS sessions, daemons, spawners, and servers. It is important to shut down the SAS servers in the inverse order in which they were started. For more information, see “Overview of Server Operation” in SAS Intelligence Platform: System Administration Guide.

5. On Windows, temporarily disable all encryption, anti-virus, anti-malware, anti-spyware, and firewall software. These types of programs can interfere with the upgrade process and block files as they are being copied and extracted.

7. Choose Language

- From the drop-down list, select the language that you want the deployment wizard to use when it displays text, and click OK.
8. Select Deployment Task
   - Select **Install SAS Software**, and click **Next**.

9. Specify SAS Installation Data File
   - Click **Browse**, locate your SAS installation data file, and then click **Next**.
10. Checking System

- Wait while the SAS Deployment Wizard checks your system. When it is finished, click Next.

- If the wizard lists any files in the text box, then while the wizard is still running, quit SAS, and add Write permission to each file listed. When you are finished, click Next.

11. Deployment Summary

- When you see the Deployment Summary page, the deployment wizard has finished collecting installation and configuration input. This is the last
opportunity to go back and change any information that you have provided in previous pages before the wizard begins writing to your system.

Make one of the following choices:

- Click **Start** to begin upgrading SAS files on the current machine.
  The deployment wizard launches the upgrade process and provides an ongoing status update.

- Click **Back** to navigate to earlier wizard pages to change information previously entered.

- Click **Cancel** to terminate the wizard session. Note that you will lose information previously entered.

On Linux, when you are upgrading the server tier, you are instructed to run a script as root. As the message in the deployment explains, certain SAS products and features use functionality that requires SAS to check user ID authentication and file access authorizations. This necessitates that certain files within your SAS installation have setuid permissions and be owned by root.

On Windows, the deployment wizard checks to make sure that your machine contains the minimum system requirements necessary to run SAS 9.4. Sometimes it is necessary to reboot your machine after the wizard has installed certain system components. When this occurs, after you log back on to the machine, the wizard continues to the next configuration step in your SAS deployment process.
12. Deployment Complete

- Green check marks next to every item on this page indicates that the installation phase of your upgrade completed successfully. Click Next.

- If you received errors during your installation, contact SAS Technical Support at mailto:support@sas.com. Attach to your email the files listed in “Review SAS Deployment Tool Documents, Reports, and Logs” in SAS Intelligence Platform: Installation and Configuration Guide.

The Specify Configuration Directory/Level page appears with a right-pointing arrow in its Status column and a progress indicator at the bottom.
Note: Do not close this SAS Deployment Wizard page while the SAS Deployment Manager is running.

13. Specify Connection Information page

- In **User ID**, enter the metadata identity for the Unrestricted Administrator.
  
  *Note:* Refer to Table A1.1 on page 63.

- In **Password**, enter the password for the Unrestricted Administrator account, and click **Next**.
14. SAS Internal Account: SAS Trusted User

- In **Internal Password**, enter the password for the SAS Trusted User account, and click **Next**.

  *Note:* Refer to Table A1.1 on page 63.

15. In **URLs White List**, enter a comma-delimited list of additional known hosts and domains to trust in the following form:

```
http|https://host[:port] | domain/, ...
```

The valid URLs whitelist can include just a list of host names to trust. The valid URLs whitelist can also include wildcards such as * for host name and domain.

  *Note:* The port number must be specified if the whitelisted site uses port numbers other than the standard 80 for HTTP or 443 for HTTPS.

For example:

```
https://myserver:443/, http://example.com
```

For security reasons, you must list any host name URL for any site that could redirect browsers to your software. This might include corporate sites linking to your software for reporting purposes or single sign-on servers.

For example, if https://corporatePortal.company.com/ links to your server, then enter https://corporatePortal.company.com/ as one entry. This field enables you to add additional known hosts and domains to a preset list automatically created by the SAS configuration process.

For more information, see “Configure the Cross Domain Proxy Servlet through a Whitelist” in *SAS Intelligence Platform: Middle-Tier Administration Guide*.

- Select **Enter advanced options for URL white list handling** to display an additional page on which you can specify advanced options for the whitelist.
16. SAS Web Infrastructure Platform Database: JDBC Properties

- In **Password**, specify the password for the SAS Web Infrastructure Platform Database user, and click **Next**.

  *Note: Refer to Table A1.1 on page 63.*

17. Services Database Credentials

- In **Password**, specify the password for the user account that SAS uses to create a JDBC connection to the Services database, and click **Next**.

  *Note: Refer to Table A1.1 on page 63.*
18. SAS Visual Analytics Sample Reports
   • Click Next.

19. SAS Visual Analytics: Access to Geo Map URLs
   • Do not change the default information that is displayed on this page. Click Next.
20. SAS Visual Data Builder Database Credentials

- In **Password**, enter the password for the user account that SAS uses to create a JDBC connection to the SAS Visual Data Builder database, and click **Next**.

*Note:* Refer to Table A1.1 on page 63.

21. SAS Internal Account: Search Interface to SAS Content User

- In **Internal Password**, specify the metadata password for the internal user account that permits access to SAS content that is provided to SAS Information Retrieval Studio for indexing, and click **Next**.

*Note:* Refer to the information recorded in Table A1.1 on page 63.
22. Summary (SAS Deployment Manager)

- When you see the Summary page, the deployment wizard has finished collecting upgrade input. This is the last opportunity to go back and change any information that you have provided in previous pages before the wizard begins upgrading your system.

Make one of the following choices:

- Click **Start** to begin performing the upgrade on the current machine.
  
  The deployment wizard launches the upgrade process and provides an ongoing status update.

- Click **Back** to navigate to previous pages to change upgrade information.

- Click **Cancel** to terminate the deployment wizard session. Note that you will lose upgrade information previously entered.

**CAUTION:**

If you encounter a situation in which the deployment wizard reports a configuration failure, leave the error message displayed. Do not continue. Consult additional documentation and, if necessary, contact SAS Technical Support. Moving past an error most often results in having to delete your deployment and start over.

On Linux, when you are upgrading the server tier, you are instructed to run a script as root. As the message in the upgrade explains, certain SAS products and features use functionality that requires SAS to check user ID authentication and file access authorizations. This necessitates that certain files within your SAS deployment have setuid permissions and be owned by root.

On Windows, the deployment wizard checks to make sure that your machine contains the minimum system requirements necessary to run SAS 9.4. Sometimes, it is necessary to reboot your machine after the wizard has upgraded certain system components. When this occurs, after you log back on to the machine, the wizard continues to the next step in your SAS upgrade process.
23. Additional Resources (SAS Deployment Manager)
   - Use the links displayed to review more information about your SAS deployment.
   - Click Finish to close the SAS Deployment Manager.

24. Specify Configuration Directory/Level (Finished) page
   - A green check mark indicates that your upgrade completed successfully. Click Next.
   - If you received errors during your upgrade, then contact SAS Technical Support at mailto:support@sas.com. In your email, attach the files listed in "Review SAS
25. Additional Resources

- Be sure to review the Instructions.html file to see whether there are post-upgrade steps that you must perform.

- Click **Finish** to close the SAS Deployment Wizard.

26. Deployment Summary report

- Review the Deployment Summary report for a list of SAS products that were upgraded and information about next steps.
27. Proceed to the step **Perform any manual post-upgrade deployment steps on page 65.**

---

**Deployment Summary for 2015 Jul 14 15:11:34**

The SAS Deployment Wizard has applied the latest updates to the software installed on this machine. These software updates might include a maintenance release for SAS, product-specific maintenance releases, product upgrades to new versions, or support components. The products that were updated are listed in the Update Summary section.

1. Review the ‘Products to Install’ list to confirm that all installations completed successfully. For any warnings or errors, refer to the maintenance logs. See [http://support.sas.com/documentation/cdl/en/whasdm06129/HTML/default/instalfiles.htm](http://support.sas.com/documentation/cdl/en/whasdm06129/HTML/default/instalfiles.htm) for more information about audit files.
2. After you confirm that the updates were applied successfully, you must perform some post-configuration steps. Refer to the ‘Products to Upgrade’ list below to determine which products were updated.

To determine the post-configuration steps for your products, see the documentation on the SAS Support web site at [http://support.sas.com/documentation/cdl/en/whasdm06129/HTML/default/instalfiles.htm](http://support.sas.com/documentation/cdl/en/whasdm06129/HTML/default/instalfiles.htm). In these installation instructions, find the step where the Deployment Summary opens and then proceed with the post-configuration steps for your products.

**CAUTION:** If you do not perform the manual configuration steps for your software, you could experience unexpected behavior or errors that will affect the use of your software.

If you wish to add new software or new languages to your deployment, restart the SAS Deployment Wizard and select the new software and languages that you wish to deploy.
