Key Features

Key features in SAS Workflow Manager 2.3 enable you to do the following:

- workflow administrators can create and manage business calendars to exclude specific days of the week, dates, or both for timer events.
  
  For more information, see “About Business Calendars” in SAS Workflow Manager: Administrator’s Guide.

- users can add business calendars to boundary timer events. For more information, see “Add a Boundary Timer” in SAS Workflow Manager: User’s Guide.

  Note: Only SAS Workflow Administrators can create, edit, and delete business calendars.

- configure a default workflow administrator account for users who can administer SAS Workflow definitions.

  For more information, see “Configure the Default Workflow Administrator Group” in SAS Workflow Manager: Administrator’s Guide.

- manage administrative failure notifications for additional service task and timer failures.

  For more information, see “Administrative Notification Subscription” in SAS Workflow Manager: Administrator’s Guide.

- add users or groups to the Excluded Owner role. Using excluded owners ensures that the same person does not review the task twice and can increase the transparency of an organization’s processes.

  For more information, see “Managing Participants” in SAS Workflow Manager: User’s Guide.

- workflow administrators can customize performance parameters.

  For more information, see “Configure Workflow Performance Parameters” in SAS Workflow Manager: Administrator’s Guide.

- use transient variables with service tasks to store values that are required for the next step in the workflow.
For more information, see “About Service Task Transient Variables” in SAS Workflow Manager: User’s Guide.

- save REST Service Tasks as custom task templates. Task templates can be selected for use in other workflow definitions.
  
  For more information, see “The Template Action” in SAS Workflow Manager: User’s Guide.
